of CO2 abated annually

Lyndoch Living, a prominent provider of aged, retirement, and assisted living services in South-West Victoria, has been dedicated to offering a broad range of residential aged care solutions. Catering to nearly 200 residents, the facility boasts five distinct types of housing, reflecting its commitment to accommodating a diverse range of resident needs. In recent years, the facility has undergone significant expansion efforts to enrich the services and capacity of Lyndoch Living.

To align the lighting infrastructure of its well-established buildings with the standards set by its newer constructions, a thorough lighting audit was conducted with the dual objectives of reducing energy consumption through the installation of LED lights and enhancing the overall lighting quality within the premises, particularly in areas where the existing fixtures were outdated and inefficient

The comprehensive LED lighting upgrade spanned various areas of the Lyndoch Living complex, including residents' rooms, staff offices, communal spaces, corridors, kitchens, stairwells, and plant rooms. Over 600 outdated fluorescent light fittings were replaced with cutting-edge, energy-efficient LED fixtures. This extensive upgrade was completed within a concise timeframe of just 5 days, ensuring that the day-to-day operations of Lyndoch Living were not disrupted.

With the aid of government subsidies through the Victorian Energy Upgrades program, Lyndoch Living as a not-for-profit organisation not only bolsters its sustainability efforts but also ensures that the financial savings realised can be reinvested into further improving the quality of life for its residents and the broader community they serve.

About The Green Guys Group

As Australia's Leading Energy Saving Partner, we specialise in LED lighting, heat pump water heater, and air conditioning system upgrades, while our Green Guys Solar division offers cutting-edge solar solutions. Our approach includes securing government subsidies to maximise our clients' return on investment. Our comprehensive project management is anchored in ISO certifications in quality management, occupational health & safety, and environmental standards, ensuring quality and safety in every project.
