Next Green Group Energy Solutions

Next Green Group is a team of dedicated energy experts committed to supporting Australian businesses in their journey towards sustainability and achieving net-zero carbon emissions.

Combining the cutting-edge technologies, refined processes, robust systems, and outstanding successes of Next Business Energy and The Green Guys Group, we deliver a complete suite of energy solutions to reduce your energy usage, costs, and carbon emissions, all through a single provider.

We empower our clients to take back control of their energy through renewable energy generation, energy storage, energy efficiency solutions, solar embedded networks, demand response technology and sustainable retail electricity supply.

For solar and hot water installers, we offer GreenForms Trading, a user-friendly online platform and mobile app that simplifies the creation and trading of Small-scale Technology Certificates (STCs).

At Next Green Group, we are driven by a bold vision to transform the way energy is consumed, reduced and managed.

In this rapidly changing Australian energy landscape, Next Green Group brings you energy reimagined.

Reimagine energy for your business...

Leverage our no-obligation business energy assessments

Just like you have a doctor to see when you're sick or mechanic you trust to look after your car, Next Green Group is here to help you with ALL your energy needs. We offer no-obligation on-site energy assessments to see where you could reduce your energy usage and energy spend. It may be a solar solution, energy-efficient lighting, or upgrading your hot water system. These are just a few of the services we offer at Next Green Group.

14

We are an Australian renewable energy and efficiency company with over 14 years in business and offices across Australia.

Our aim is to provide people and businesses of all sizes the best options available to help them save money and reduce their usage and emissions.

To achieve this, we offer a full energy assessment of your property or business and then provide what we believe are the best available options for your energy needs.

We have a team of qualified consultants, engineers, and project managers with extensive experience in the industry.

Next Green Group is the only energy partner you'll ever need.

We work with you whenever needed to look at your energy needs and how we can help you now and into the future.

Government Rebates & Incentives

Next Green Group is committed to simplifying the process for Australian businesses to access a complete suite of affordable energy solutions.

As part of our comprehensive service, we assist our valued customers in accessing various Federal and State Government incentives.

By leveraging our knowledge and experience, we maximise the subsidies secured for each project, ensuring that every customer receives the utmost support in implementing sustainable solutions that reduce their energy costs and consumption. To date, our team has successfully helped our customers secure more than \$60 million in subsidies, enabling businesses to offset their initial investments and achieve quicker returns.

We are dedicated to making the process as seamless as possible, allowing our customers to focus on their core operations while reaping the rewards of reduced energy costs and increased sustainability.

Services we provide

Retail Electricity Supply

Let us introduce you to a new era of business only electricity services... because your business deserves better.

Next Business Energy is your trusted partner in electricity. Next Business Energy was built on delivering unrivalled service levels back to the electricity industry. We specialise in quality, accurate and timely consolidated billing, personalised service and account management with expert services.

Next Business Energy specialise in servicing small to medium businesses. This means that we can focus all our attention on providing the best service to business clients, government bodies and charitable organisations.

Our aim is to provide the most competitive rate we can offer for your business. We offer free no obligation cost comparisons to see if you can save with Next Business Energy.

Solar Systems & Batteries

Harness the power of sunlight to produce clean, renewable energy and take control of your energy expenses with a solar photovoltaic (PV) system.

Our solar solutions are tailored based on your current energy consumption and requirements, accompanied by a real-time energy monitoring system. We offer integrated battery storage options, allowing you the flexibility to store excess energy generated or sell it back to the grid.

In addition to the option of purchasing a solar PV system outright, we offer a Solar Power Purchase Agreement (PPA). With a PPA, we take care of the solar PV system supply, installation, and maintenance at no upfront cost to you. Instead, simply pay for the solar energy you use at a rate lower than market prices.

For larger energy users with multi-tenanted premises, we have the Solar Microgrid solution, which serves as an embedded energy network, enabling buildings with multiple tenants to collectively purchase electricity at a more affordable rate.

We offer a free onsite assessment to provide you the best system for your situation.

Energy Efficient Lighting

Ever wondered how much your lighting is costing you?

You can **reduce this cost by up to 70%** by upgrading your old lighting to the latest energy-efficient LED (Light Emitting Diode) lighting technologies.

LED lights have an extended lifespan, minimising the need for frequent replacements and reducing maintenance costs over time. With our expertise in tailored Australian Standard LED lighting designed in-house, we offer comprehensive implementation options that cater to diverse environments, ranging from standard office spaces to specialised applications such as healthcare facilities, transportation depots, and food manufacturing facilities.

Take advantage of a range of Federal and State incentive schemes specifically designed to support Australian businesses in transitioning to energy-efficient solutions. As part of our comprehensive services, we handle the entire process, including the application for these incentives on your behalf. Our aim is to simplify the process, providing you with a hassle-free experience while maximising the financial benefits of both the government incentives and your LED lighting upgrade.

Heat Pump Hot Water

Make the switch to a highly energy-efficient heat pump hot water system, and save on energy costs.

Heat pump hot water systems extract heat from the surrounding air to provide hot water, making them up to four times more energy-efficient than traditional electric or gas systems. This can result in up to 80% reduction in energy consumption and significantly lower energy bills.

In addition to reducing your carbon emissions, the heat pump system does not emit any harmful gases into the atmosphere. They are designed to run only when needed at optimal speeds. The refrigerant boils at below 30°C temperatures so the heat pumps work well even at below zero air temperatures.

Our systems are designed to suit Australian climates and business needs, with a range of split and all-in-one options available in various sizes. We can help you design a system that perfectly meets your requirements.

By choosing a heat pump hot water system, you'll not only save on costs but also minimise your environmental impact.

This service is also available for households!

Energy Efficient Air Conditioning

Enjoy year-round comfort and lower energy costs with a new air conditioning system that both cools and heats.

We know how important it is to keep the workspace comfortable, and we make upgrading a breeze. Our team can visit for a complimentary consultation, assess your needs, and recommend the ideal air conditioning solution for your space, ensuring optimal energy efficiency and performance.

Choose from a range of cutting-edge reverse-cycle split systems, including multi-head options for larger office spaces. These systems offer significant advantages over centralised systems, such as independent zone control, simplified maintenance, and a more aesthetically pleasing design with a single outdoor unit. Experience cost savings of up to 70% on heating compared to traditional ducted gas heating systems.

Invest in lasting comfort and enjoy the benefits of improved air quality, reduced energy costs, and enhanced property value.

This service is also available for households! Contact us to upgrade your home or offer employee benefits for home upgrades.

Power Purchase Agreements

Power Purchase Agreements (PPAs) have been developed as part of the Next Green Group mission to help businesses with lower cost daytime electricity via renewable technology.

The Next Green Group PPA is a "Solar as a Service" solution, which can provide electricity for your business at a cost lower than the national grid. This gives your business immediate savings and a long-term energy hedge as you know the electricity cost for the next 10 to 25 years, compared to only one to three years from the grid.

Our leading approach means that you have no loans or upfront costs. Our experienced team provide energy rates that minimise your peak energy use and hence costs.

At the end of the term you have the option to own the solar generation assets and the power it produces.

How will our PPA solution **BENEFIT** your business?

There are many benefits to being a business customer...

- ✓ Cheaper energy rates
- ✓ No loans
- ✓ No upfront costs
- ✓ Business asset
- ✓ Less emissions
- ✓ Savings from day one

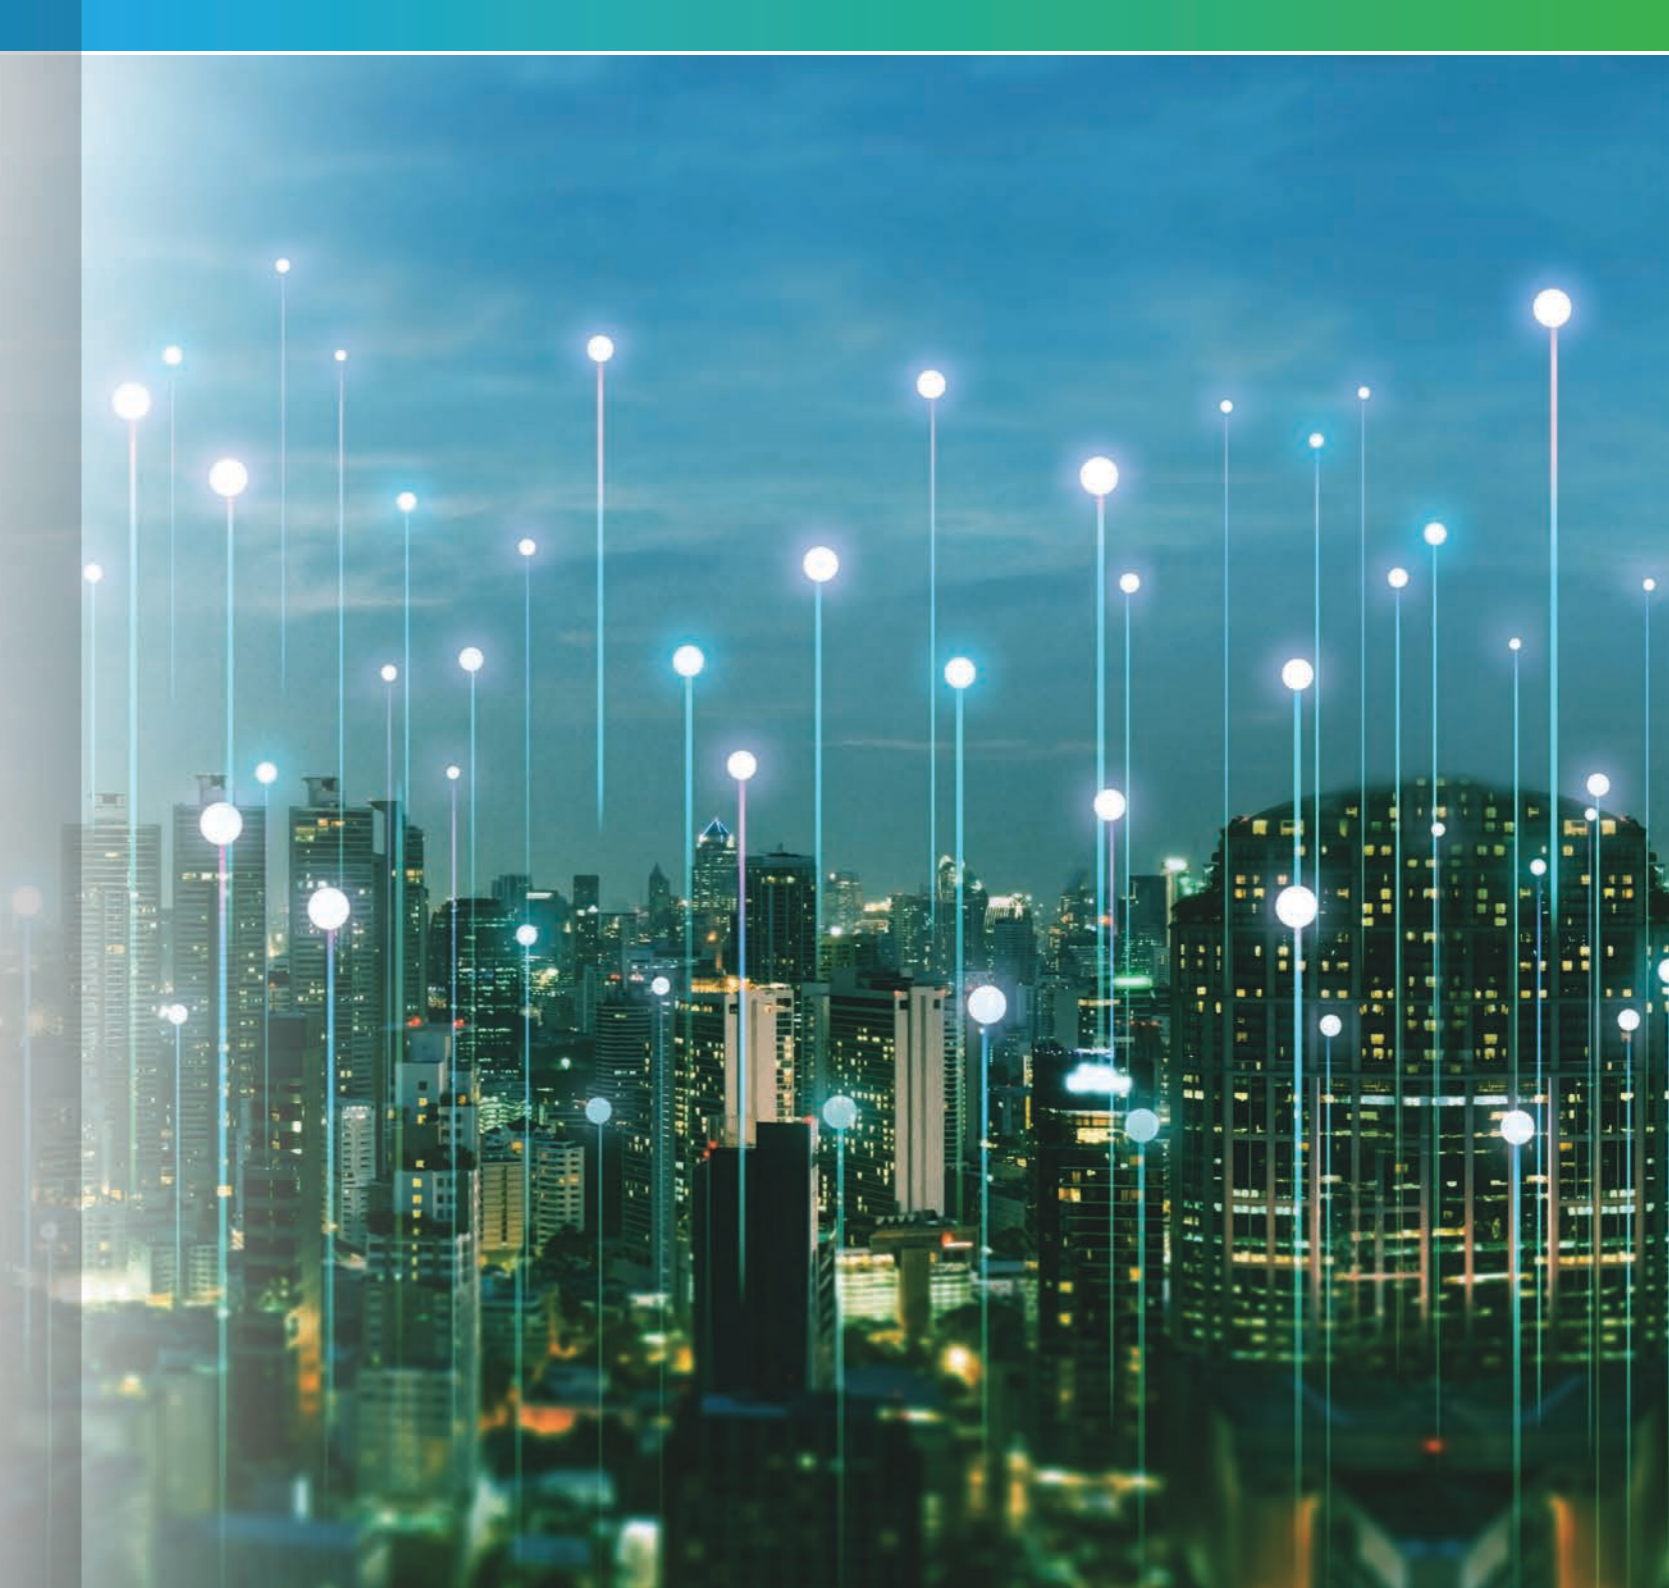

Virtual Power Plants

A Virtual Power Plant may be your next step to optimise your energy assets and share energy smartly across your portfolio.

By integrating solar PV systems, battery storage and smart metering with NGG's Virtual Power Plant you can maximise the utilisation of your energy resources across your portfolio and gain access to different value streams across the Australian Electricity Market.

Through NGG's cutting-edge software and technology, this allows excess energy to be generated, stored and distributed even across multiple sites and provide you with a leading edge platform to monitor and optimise your assets.

Your business could benefit from reduced energy bills, reduce emissions and additional revenue streams all while supporting the transition to net zero and a more resilient renewable energy grid.

Electric Vehicle Charging

As Australians increasingly embrace Electric Vehicles (EVs), the demand for EV charging infrastructure in businesses is rapidly growing.

To cater for this shift, it's crucial for businesses to invest in the appropriate charging solutions tailored to their car parking facilities. Selecting the right charger and optimising energy production are important steps in accommodating the evolving needs of EV drivers and ensuring seamless integration into your business operations.

Getting it wrong can cost so much more than needed in both the short and long term.

Next Green Group have a wide range of EV charging station options and can work with your business on how to best supply the energy to your car park facilities.

With more staff and customers choosing EVs, having a charging station could be the difference between attracting and retaining clients and talent.

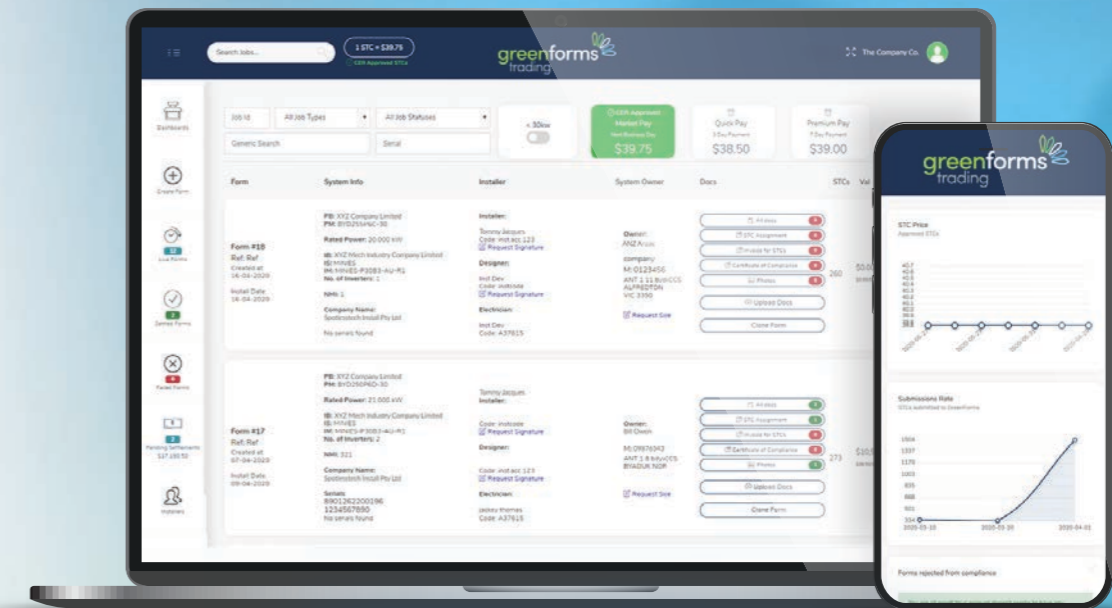

GreenForms Trading

GreenForms Trading offers a comprehensive solution to streamline your STC applications for solar PV, solar hot water & heat pump hot water systems.

Built by solar industry professionals, our user-friendly online platform and mobile app make it easy to capture and manage data, collaborate with your team, and trade your STCs efficiently.

Why choose GreenForms Trading?

-  **Price Protect**
Trade with confidence knowing your prices are locked in, minimising risk and maximising returns.
-  **Seamless Onboarding**
Experience hassle-free account creation and start trading in minutes.
-  **Intuitive Interface**
Navigate our user-friendly online platform and mobile app with ease.
-  **Australian-Owned & Operated**
Trust a local company dedicated to serving the Australian market.
-  **Local Australian Support**
Receive personalised assistance from a dedicated account manager who understands your business needs.
-  **Backed by a Trusted Name**
Benefit from the stability and reliability of energy market pioneer Next Green Group.
